

LQ8 Cassini follow-up · fixed galaxy parameters · 384 × 288 solar grid

Solar prediction and weak-field sensitivity

Where the local Poisson-source integral lies

Floors alter the local law; they are not derived nonlocal corrections. No theoretical error bars are assigned.

Source shares are a diagnostic of the local field, not a bound on nonlocal changes. $R_{\text{dark}} = 5,693 \text{ AU}$. Cassini: Park et al. (2026), v2.
